Overview of Book

This book is compiled based on a table of contents found in the Dodd Archives at the University of Washington. Dr. Dodd contracted with a published in 1971 to produce 4 volumes containing papers around four broad themes in sociological research. This particular volume collected many of his papers on “human value” and was intended to be the first of the four volumes to be published. Unfortunately, the publishing company encountered financial difficulties and the contract was cancelled. These four collections of papers conceived by Dr. Dodd’s near the end of his career were his attempt to present a broad view of his entire body of work. I begin this book with the outline for Volume 1 of Dodd’s projected 4 volume set of books on his work.
