

# The MASS-TIME Triangle (MTT) Model

## The MASS - TIME TRIANGLE (MTT) MODEL of the Cosmos = U<sub>0</sub> = 1

The EPICOSM HYPOTHESIS asserts for testing: "If all n actants (i.e. things-namable) interact, randomly and ceaselessly, in all their possible n ways, then they produce the cosmos and all its parts - as a vast stochastic process at a Creatant Rate, c (= lg 10) in 8 hierarchical normal levels, during each cohort's half-life.

**EPICOSM EQUATION**  
 $A_t = C_t^n$  where  
 or in logs C = Creation Rate  
 t = time taken  
 a = log A<sub>t</sub>  
 c = log C = lg 10
